

Bargoed

version 1.06

PREAMBLE

Bargoed is an easily accessible quarry (1 min. flat walk from the car) consisting of two walls separated by an arete. It is west facing and so becomes a suntrap during the summer. However, it is also well sheltered, so winter climbing may be possible. The routes are bolted for popularity and there are LO's on most. The climbs are on generally steep slabs and vertical walls of porous sandstone and have considerable individual character. In its rejuvenated state, Bargoed has been promoted to the premier league of sandstone crags.

ACCESS

Gain the A469 Bargoed Bypass following signs for Rhymney, pass through through several roundabouts, downhill past the train station, until a large viaduct is reached. Proceed right (past but not under the viaduct) toward Aberbargoed for 200 m and just as Bedwellty Road steepens and a large green sign announces your arrival in Aberbargoed turn left into a gravel roadway, Quarry Row (large white billboard). Drive past the houses until they are out of sight and park at a small pull in on the right, which fits 3 cars.

If on foot, alight at Bargoed railway station and turn left downhill to reach the viaduct. Walk 100m up the hill and turn left into Quarry Row.
